

Proposed Design

Trigger: update from keyboard

Description of the Design

- Game
 - Data: Current game state, turn information
 - Behavior: Manage game flow, validate moves, update scores
- Board
 - Data: Grid of squares, current tile placements
 - Behavior: Place tiles, check valid placements, calculate word scores
- Players
 - Data: List of Player objects
 - Behavior: Manage player turns, track overall game progress
- TileBag
 - Data: Collection of remaining tiles
 - Behavior: Distribute tiles, replenish player racks
- Dictionary
 - Data: List of valid words

Behavior: Validate words played on the board

- Square

Data: Position on board, current tile (if any), square type (normal, double letter, etc.)

Behavior: Hold a tile, provide score multipliers

- Player

Data: Name, score, current rack of tiles

Behavior: Play moves, exchange tiles, pass turns

- Tile

Data: Letter, point value

Behavior: Provide letter and score information
